

HUDA RASMEY

Senior Unreal Engine Gameplay Programmer — GAS, AI, Multiplayer

Abu Dhabi, UAE | huda.rasmeysc@gmail.com | (+971) 50-395-0918 | [Portfolio](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Senior Gameplay Programmer with 14+ years in game development and 4+ years in Unreal Engine, building gameplay, multiplayer, AI, and tools for PC, mobile, and VR/AR titles. Experienced in owning systems from requirements and architecture through implementation, testing, review, and team adoption, with hands-on technical leadership in C++, C#, and Python.

CORE SKILLS

- Languages & Engines: C++, C#, Python, Unreal Engine (UE4/UE5) incl. Blueprints, Unity3D
- Gameplay Systems: Gameplay Ability System (GAS), Enhanced Input, AI, camera systems, combat, animation blending & IK
- Architecture & Multiplayer: System design, data-driven gameplay, client-server architecture, Unreal replication/GAS multiplayer, Photon
- Tools & Pipelines: Unreal Editor tooling, Python automation, Visual Studio, Rider, Unreal Insights, Unity Profiler, Firebase
- Source Control & Delivery: Git, Perforce, Agile (Scrum/Kanban), Jira, Trello, code review and testing workflows
- Platforms: PC, Mobile (Android/iOS), VR/AR (Oculus, HTC Vive, Kinect, ARKit)
- Leadership: Technical direction, task decomposition, code review, mentoring, onboarding, cross-functional collaboration

PROFESSIONAL EXPERIENCE

Unreal Game Programmer — My Whoosh Technology

June 2025 – Present

- Co-defined and implemented refactoring of player customization and animation systems to improve extensibility, maintainability, and future feature integration.
- Designed technical approaches for internal Unreal tools by gathering requirements from route-generation/design, QA, and development teams, then aligning implementation around shared needs.
- Migrated gameplay logic from Blueprints to C++ and contributed code reviews and implementation feedback to improve maintainability and help unblock other programmers.
- Built custom Unreal Editor tools and Python automation to streamline internal pipelines, reduce repetitive manual work, and speed up iteration.

Volunteer Game Developer & Tech Lead — P1Games

May 2024 – 2025

- Led a multidisciplinary game-development team, coordinating with producers, programmers, artists, and designers while organizing sprints and translating project goals into clear technical tasks.
- Decomposed features, assigned ownership based on developer experience, reviewed progress, resolved blockers, and contributed hands-on development across Unreal and Unity projects.

Senior Game Developer — Toptal

Oct 2022 – 2023 (freelance, single engagement)

- Delivered an Unreal Engine C++ project independently, owning the technical roadmap and working directly with the client from requirements through implementation and delivery.

Unreal Game Programmer — Ironbelly Studios

Jan 2023 – Aug 2024

- Designed and shipped a GAS/Enhanced Input ability-queue system for complex time-sensitive inputs, using data-driven eligibility, priorities, cancellation rules, and separate locomotion/gameplay queues.
- Owned multiple gameplay-system initiatives, including redesigning a dynamic camera system and adapting an in-house AI attack system; gathered team requirements, documented architecture, and implemented reusable C++ solutions.
- Mentored and onboarded junior developers, sharing project architecture, reviewing code, and helping them ramp up on the codebase.

Senior Unreal Game Programmer — Instinct Games

Apr 2021 – Jan 2023

- Engineered PC gameplay features and integrated VFX assets in Unreal Engine.
- Collaborated with designers, artists, and QA to integrate gameplay features and diagnose pre-release issues, improving build stability and cross-discipline iteration.

Lead Unity Game Developer — Besteam

June 2020 – Feb 2021

- Led delivery of Unity/WebGL robotics-competition levels, coordinating development work, assigning tasks, and supporting the team through technical blockers.
- Built gameplay functionality for remote competition experiences while maintaining delivery quality and schedule commitments.

Senior Unity Game Developer — FunRock

July 2018 – March 2019

- Owned frontend/UI development for Android and iOS titles, working across feature implementation and production integration.
- Designed and implemented reinforcement and Events & Quests systems, contributing reusable gameplay functionality for live mobile titles.

Senior Unity Game Developer — Cryptyd Game Studio

March 2018 – July 2018

- Built backend and networking integrations using Kii and PlayFab for Android and iOS game features.

Lead Unity Game Developer — 5D-VR

March 2015 – Feb 2018

- Led and developed VR/AR projects across Kinect, HTC Vive, Oculus, Samsung Gear, Cardboard, iOS, and Android, while guiding junior developers through code reviews and project onboarding.
- Developed multiplayer gameplay using GameSparks and supported technical delivery across projects with varied hardware and platform constraints.

KEY PROJECTS

- Dynamic Camera System (Unreal) — Took ownership of a redesign after the existing camera approach no longer met project needs; gathered requirements, discussed alternatives with the team, documented the agreed architecture, and implemented an extensible event-responsive system.
- Input / Ability Queue System (Unreal, GAS) — Designed a data-driven queue architecture for overlapping gameplay inputs, with configurable eligibility, priority, cancellation behavior, and separate handling for locomotion and gameplay actions.
- AI Attack Token System (Unreal) — Led the technical approach for adapting an in-house AI attack system toward smarter, context-aware combat coordination while keeping the solution flexible for designers and future behaviors.

EDUCATION

Master of Business Administration (MBA) — Liverpool John Moores University, 2024 – Feb 2026

Game Development Diploma — Information Technology Institute, 2011 – 2012

Bachelor of Computer Science — Ain Shams University, 2006 – 2010
